FilesOnTheGo Data Sheet

The demand for expanded and targeted remote information access requirements that solve user's requirements continues to evolve based on today's highly competitive global economy. These users expect easy access to their dynamic content data (Audio, Video, Text) across any network, using any web-enabled device.

These mobile users face a variety of obstacles including administrative and security policy barriers that prevent them from connecting easily and transparently through the various proxy servers, firewalls, NAT devices, and routers that sit between networks

To effectively handle these scenarios, Neunet Solutions is excited to announce its newest addition to their product offering. **FilesOnTheGo** provides individual end-users and organizations the solution to support full-time remote access for users; i.e. "day extenders" who supplement office hours by working from a home PC, business partners working from their offices, and ad-hoc remote access users who want access from anywhere on the road.

FilesOnTheGo is the lifeline that:

❑ **Enables agility and productivity –** Students, teachers, telecommuters, traveling executives, and anyone who needs to access files remotely without having to carry around a bulky laptop, floppy disks, CDs, and printed files
❑ **Reduces latency -** where obtaining accurate data is critical "FilesOnTheGo" can reduce the time it takes to seize opportunities with the most current data; i.e., presentations, contract data and sales proposals that are on the users remote servers or PC's
❑ **Coordinates geographically dispersed teams - FilesOnTheGo** can span time zones and geography to facilitate communication by allowing colleagues, friends, and family members restricted access to files you want to share.

❑ **Delivers ROI -** lowers e-mail volume, reduces telephony costs and ensures timely access to users who need the critical information.

*It's **YOUR** company. **YOUR** critical data. **YOUR** competitive advantage.*

You've worked hard. You've crafted the competitive advantage that's second to none. But the remote user is at a loss to seize opportunities with the most current data.

With **FilesOnTheGo** you save all the hassle of carrying your laptop or worrying about bringing the right documents with you. All you need is a computer with access to the Internet to begin remotely accessing your documents anywhere, anytime.

Here's how it FilesOnTheGo works:

❑ You will need to install it on the computer that has an open connection to the Internet, in other words have Broadband or DSL connectivity.
❑ FilesOnTheGo will catalogue all your documents (MS Word/Excel, Word Perfect, MS Power Point, PDF, media files, and much more).
❑ It will facilitate the viewing of the documents remotely from any computer with an Internet connection!
❑ It will search unlimited numbers of documents that are in your computer/server that have been catalogued by FilesOnTheGo!
❑ It will sort your files by name, date, size, and location to quickly retrieve the one you are searching for.
❑ It will download documents and make necessary modifications as needed.
❑ It will upload documents to save it back to the original location.
❑ It will allow your colleagues, friends, and family members restricted access to files you want to securely share with them.

Providing Real Time Integrated Solutions with *bottom-line results!*
